INDEX

PROCEEDINGS OF THE AMERICAN CONCRETE INSTITUTE, VOLUME 27

In general, important subjects are classified and indexed under approximately 30 main headings each one appearing in its proper alphabetical order in bold face capital letters—as for instance, ARCHITECTURAL DESIGN. "Surface treatment" and other subjects classified under this head, are indented.

Key words to important subjects appear, in alphabetical order in addition to the general classification—as for instance "Admixtures" and "Blast furnace slag," each referring to MATERIALS AND TESTS under which all allied references appear, indented. Authors' names appear in proper alphabetical sequence with the subjects, with references to their contributions.

Specific data on Beams are so indexed by reference to "ENGINEERING DESIGN" or "TESTS OF MEMBERS AND COMPLETED STRUCTURES" thus avoiding an oversight by the searcher of important allied data.

The readiest use may be made of this index by gaining some familiarity with the thirty main classifications.

The searcher for information on design and proportioning of concrete mixtures will look for MIXTURES and refer to subheads; "Design" and "Proportions." Field control methods will be found under TESTS AND FIELD CONTROL.

A

Abrams, Duff A.—Disc. Some long time tests of concrete....1327
—The American Concrete Institute and concrete research.... 953
Admixtures and workability. Williams... 647
—See also MATERIALS AND TESTS.
Ahlers, John G.—Disc. Tests of bonding floor finish to slabs of Haydite and gravel concrete....1033
Allan, W. D. M.—Specifications for concrete burial vaults. Progress report committee 709....1251
—Use of color in concrete. Progress report committee 408.... 975
Anderegg, F. O.—Disc. Workability and admixtures....1158
ARCHITECTURAL DESIGN
Surface treatment—Forms and molds. Wagner.... 225
—Monolithic concrete.
